

## Abstract

(see Fig. 1a)

In order to make an operating device easier to operate and to make final positions more convenient, it includes

5 - a base body (8), that is at least partially surrounded by  
- a housing body (2),  
- whereby the housing body (2) includes a disk body (3),  
that is held via a basic position magnet arrangement (6)  
with respect to base body (8) and  
10 that may be moved by at least one motion element (5) with  
respect to the base body (8).
